

EXECUTIVE SUMMARY
Five-year view: FY2021-FY2025

This summary covers 145 regulated UK banking entities. It highlights changes in the disclosure population and shows sample sizes so sparse metrics are not mistaken for full-market evidence. Ratios are not mixed with cash-flow or RWA amounts, and comparable movement is based only on entities with both years.

EXECUTIVE SUMMARY (CONTINUED)

What changed over five years

The movement chart compares FY2021 with FY2025 where the same entity has both values. It is a fixed-panel direction count, not a claim that every entity was available in every intervening year.

FY2021 -> FY2025 comparable entity direction

- Risk-weighted assets increased for 73 of 99 comparable entities in FY2022->FY2023 and 75 of 100 in FY2023->FY2024.
- CET1 increased for 58 of 109 entities in FY2022->FY2023, then declined for 61 of 108 in FY2023->FY2024 and 61 of 92 in FY2024->FY2025.
- Operating cash flow improved for 70 of 118 entities in FY2023->FY2024, followed by declines for 62 of 104 in FY2024->FY2025.

Reading the charts

A rising median indicates a higher typical disclosed value among the available entities. It does not establish causation, strength, or compliance. The detailed year-pair tables and source notes follow in the report.

Metric guide

CET1, Tier 1 and Total capital ratios: regulatory capital relative to risk-weighted assets. Leverage ratio: Tier 1 capital relative to total exposure without risk weighting.

LCR: high-quality liquid assets relative to stressed 30-day net cash outflows.

NSFR: available stable funding relative to required stable funding. MREL: loss-absorbing and recapitalisation resources relative to the applicable exposure measure.

RWA: risk-weighted assets, an amount rather than a percentage. Operating cash flow: net cash generated by or used in operating activities.

Parent-group coverage

HSBC (4), Santander (3), Lloyds (3), NatWest (3), JPMorgan (2), and UBS / Credit Suisse (2) legal entities are available for comparative drill-down.
